

THE **SAFEFORK**  
FORK LEVEL INDICATOR

Each year more than 11% of all fork-lifts are affected by accidents through overload.

# INCORRECT FORK ANGLE IS A LEADING CAUSE OF PRODUCT, RACKING, PALLET AND FORK DAMAGE

The *Safefork* shows the forklift operator the level of the forks at all times thereby reducing potential damage by piercing product or racking and increasing productivity by eliminating the guess work.

The *Safefork* is so innovative, Plant Engineering gave it a Gold Metal Award „Product of the Year“ by its readers votes.

Forklifts can cause a lot of damage in a matter of seconds. Often, the forks are not at the correct angle when entering a pallet. Product damage is often the result as the forks spear the packaging and render the material not able to be sold.

New operators often have the most problem being able to determine the angle of the forks. Once the *Safefork* is installed the operator instantly knows when the forks are level and the problem is solved.

## A safer working enviroment

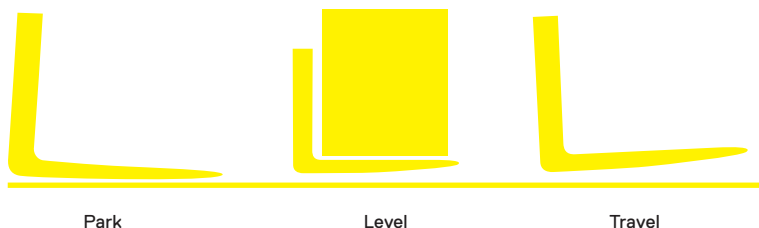

- Reduce Damage/Increase Productivity
- Reduce/Eliminate Fork Damage
- Eliminate Fork Binding
- Decrease Training Time for New Operators
- Compensates for Ground Level & Tire Wear
- Ideal for Carton & Paper Roll Clamp Operations
- Installs in 2 Minutes with No Tools

## SAFEFORK INDICATES TRUE FORK ANGLE

The *Safefork* can be mounted on the left side or right side of the mast. It installs in 2 minutes without any tools on any counterbalance lift truck.

Not only does the *Safefork* indicate when the forks are level, but it also indicates the correct angle of the forks when travelling, the correct fork angle when parked or any other angle required in your specific operation.

The *Safefork* does not need any any calibration or adjustments. Excluding any physical damage, the *Safefork* will work for the entire life of the forklift truck.
